

# WITH THE AQUARAIN SNORKEL YOU CAN NOW TAKE THE FRESHEST WATER FROM NEAR THE TOP OF YOUR TANK.

Any organic matter that gets into the tank naturally sinks to the bottom. It is that organic material (rotting leaves, sediment, and debris) that micro-organisms (bacteria) live on. They live amongst this sediment layer where they break down the organic matter.

The micro-organisms need oxygen to live and use up the oxygen from the water creating an anaerobic zone (low oxygen zone) in the bottom of the tank. The outlet pipe that takes water to your home is in that anaerobic/sediment zone. In other words we traditionally have been drinking the worst water in the tank. The freshest water is at the top of the tank.

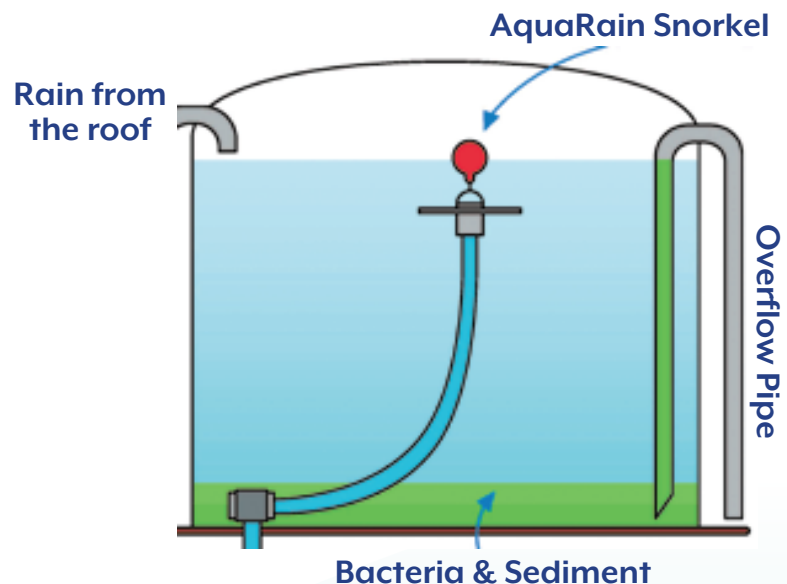

An AquaRain Snorkel is a floating pipe that feeds the freshest oxygenated water from the top of the tank into the house.

## Benefits:

Ensures the freshest oxygenated water is channelled into your home.

Results in less micro-organisms in the water you drink.

Water filters in the home last longer as no longer have sediment being continually pumped through them.
