

BENCH TOP FILTER FITTING INSTRUCTIONS

FBTCI-B

1 Micron GAC/ KDF filter – 2-year life

GAC/ KDF FILTER

GAC (Carbon) & KDF filter.
Reduces chlorine, chemical
contaminants, heavy metals,
herbicides, pesticides taste and
odour, giving you fresh-tasting
clean water.

This bench top water filter comes with a single simple screw-on diverter valve that screws onto the aerator of your hot and cold water tap.

To install the diverter valve onto your tap, remove the aerator from the spout and then screw the diverter valve onto the male spout thread and tighten by hand.

If the spout has a female end, then use one of the 2 small stainless steel male-to-male joiners to join the diverter to the tap.

Simply screw the male-to-male joiner into the female end of the tap, and the diverter valve will screw onto the end of this. Hand tighten securely.

Now turn the cold water on slowly and let the water run directly into the sink. Turn the black plastic handle 90 degrees and water will start filling up the bench top housing.

At this point, aim the spout of the water filter over the sink. Once the housing is full of water it will start flowing into the sink out of the spout.

The water will come out black at first, which is the carbon dust left over from manufacture, but this will clear to a milky colour (caused by air bubbles) for about 1 to 2 days.

Flush water through the filter for 2 - 3 minutes. Once this is done your water filter is ready for action.

Enjoy the water and thank you for purchasing the gift of pure water.

The filter cartridge will need to be changed annually, and we will contact you to arrange this.

Call 0800 500 545 or email sales@filtersandfountains if you need help or assistance.

Thank you.
